

Place the parachute over the wind.
What's holding the parachute up?

Air rising from the pushes up the parachute in its way.
Wind makes the waves and can pull an umbrella out of your hand!

WIND POWER

Air is all around us.
We can't see the air, but there are other ways of knowing that the air is there.

Place your hand over the fan.
Can you feel the air moving?
(If not, press the button on the other side of the table)

Place the yellow fan over the wind.
What makes it spin?

All the blades move in the same direction, making the fan spin!

The fan blades are at an angle to the table.

The air pushes the fan blade out of the way as it moves upward.
